skipTo is called at the start of every procedure for a nonterminal, so for the ELIST procedure the validSymbols are '+' and '-' and otherSymbols are what follows an ELIST

```
proc skipTo(validSymbols, otherSymbols: SymbolSet) {  
    if not(symbol in validSymbols) {  
        error(0);  
        validSymbols := validSymbols + otherSymbols;  
  
        while not symbol in validSymbols {  
            do nextSymbol;  
        }  
    }  
}
```
